NEXI — Competitive Research

Hotel self check-in kiosk market. 14 competitors analyzed across 3 tiers. Features, pricing, strengths, weaknesses, and opportunities for NEXI to differentiate.

Tier 1 — Direct | Tier 2 — Regional | Tier 3 — Mobile-first | Hardware | Software | Mobile

01 — MARKET

Market Landscape

$2.8B MARKET SIZE 2026	**38%** NORTH AMERICA SHARE
73% GUESTS PREFER SELF-SERVICE	**14** COMPETITORS ANALYZED

The hotel self check-in kiosk market is projected to grow at 11.2% CAGR through 2032. North America leads (38%), followed by Europe (32%) and Asia-Pacific (25%). China manufactures ~80% of global kiosk hardware. Key drivers: labor shortages, guest expectations for contactless, and post-COVID permanent behavioral shifts. 54% of hospitality executives want mobile check-in as a permanent standard (Oracle 2025).

Key Insight: The market is fragmenting into two camps: (1) full-stack kiosk companies that sell hardware + software (Ariane, ASTA, Enzosystems), and (2) software-only platforms that run on off-the-shelf tablets (Canary, Mews, Duve). NEXI bridges both as a full-stack solution with proprietary hardware and software.

Market Segmentation

HARDWARE + SOFTWARE (FULL STACK)

- Ariane Systems (Norway) — 3,000+ installations, market leader
- ASTA / Almex (Japan) — 600+ hotels, #1 in Japan
- Enzosystems (Netherlands) — European focus
- KIOSK Embedded Systems (Italy) — Hardware mfg
- Arribatec / Convene (Norway) — Scandinavian market
- Agilysys (USA) — Enterprise hospitality
- Virdee (USA) — Virtual reception + kiosk
- **NEXI / TrueOmni (USA) — Full stack, HW + SW + CMS**

SOFTWARE ONLY (TABLET/BYOD)

- Mews (Czech Republic) — PMS with built-in kiosk
- Canary Technologies (USA) — #1 rated, iOS/Android tablets
- Duve (Israel) — Mobile-first guest platform
- LIKE MAGIC (Switzerland) — Digital guest journey
- straiv (Germany) — Check-in via smartphone/tablet/kiosk
- Tabhotel (France) — Kiosk + tablet check-in
- Akia (USA) — AI-powered guest messaging

02 — COMPARISON

White-label / Branding	✓	✓	✓	✓	✓	✓	✓	✓
PMS Integration	✓	Built-in	✓	✓	✓	✓	✓	✓

NEXI Unique Advantages: Room Service ordering, Wayfinding/Maps, Events Feed, Local Listings, AI Video Avatar (HeyGen), Ad System — NONE of the competitors offer all of these on a kiosk. This is NEXI's biggest differentiator: it's not just a check-in machine, it's a complete hotel concierge station.

03 — TIER 1

Mews

Mews

Software Only | Czech Republic / Global

mews.com

Tier 1 — Direct

Full cloud PMS platform with a built-in kiosk mode. Turns any tablet into a check-in/check-out station. Major player — used by large hotel groups globally. The kiosk is a module within their larger PMS ecosystem, not a standalone product.

STRENGTHS

- Complete PMS ecosystem — kiosk is deeply integrated, not bolted on
- Embedded payments (terminals integrated)
- Booking engine + channel manager included
- Revenue Management System (RMS) with AI
- Point of Sale (POS) for F&B
- Modern UI, well-designed guest experience
- 3 pricing tiers (Essentials, Advanced, Enterprise)
- Strong marketplace of 600+ integrations

WEAKNESSES

- No proprietary hardware — runs on off-the-shelf tablets

- No physical key card dispenser
- No ID/passport scanner hardware — relies on phone scanning
- No wayfinding, events, listings, or room service on kiosk
- Kiosk is limited to check-in/out + upsells
- Pricing may be high for small properties (<20 rooms)
- Kiosk UX is basic — functional but not premium

PRICING

Not publicly listed. Three tiers: Essentials, Advanced, Enterprise. Per-room pricing model. Kiosk included in all plans. Estimated: **$6-12 per room/month** depending on tier. Implementation fee separate.

TARGET MARKET

- Mid-to-large hotel groups (50-500+ rooms)
- Hotels already looking for a full PMS replacement
- Properties wanting an all-in-one platform
- Global presence, strongest in Europe

Threat Level: HIGH. Mews is a behemoth PMS platform. Hotels already on Mews get the kiosk "for free" as part of their subscription. However, their kiosk is basic — check-in/out only. No concierge features, no hardware integration, no AI avatar. NEXI wins on depth of experience.

04 — TIER 1

Ariane Systems

Ariane Systems

Hardware + Software | Norway / Global

ariane.com

Tier 1 — Direct

World leader in hotel self-service kiosks with 3,000+ installations globally. They sell complete hardware + software solutions, including indoor kiosks, outdoor kiosks, and mobile check-in. The closest direct competitor to NEXI's business model.

PRODUCTS

- **Duo 2100** — Compact indoor kiosk, QR-based quick key pickup (20 sec)
- **Duo 6020** — Compact embeddable kiosk for custom cabinets
- **Duo 4600NA** — Full-feature indoor kiosk
- **Outdoor kiosks** — Weatherproof, 24/7 check-in from outside

- **Mobile check-in** — Web-based, works alongside kiosk
- Up to 14-key compartment storage for physical keys

KEY FEATURES

- Check-in, check-out, walk-in booking
- Passport/ID scanning
- RFID + magnetic keycard encoding
- Credit card payment (integrated terminal)
- Registration card completion
- Upsell products during check-in
- Multi-language support
- PMS integration (major systems)
- Receipt printing

STRENGTHS

- Market leader — 3,000+ installations, massive trust
- Proven hardware reliability
- Indoor AND outdoor options
- Custom cabinet integration (Duo 6020)
- 20-second QR key pickup flow
- Strong European market presence

WEAKNESSES

- Purely transactional — check-in/out only, no concierge features
- No room service, wayfinding, events, listings
- No AI avatar or intelligent assistant
- No ad system for hotel revenue
- UI looks dated — functional but not modern/premium
- No facial recognition
- Limited CMS customization for non-check-in content

PRICING

Not publicly listed. Enterprise pricing via consultation. Based on market data, estimated: **$15,000-30,000 per kiosk unit** (hardware + installation) + **$200-500/month** software license + support. Custom quotes per hotel.

Threat Level: HIGH. Ariane is the incumbent market leader. Their advantage is scale and trust. Their weakness is innovation — they're a check-in machine, period. NEXI's multi-module approach (concierge, room service, wayfinding, AI) puts it in a different category entirely.

Canary Technologies

Software Only | USA / Global

canarytechnologies.com

Tier 1 — Direct

#1 rated Guest Engagement Platform on Hotel Tech Report. 25,000+ hoteliers. Their kiosk is software-only — runs on any iOS or Android tablet. Part of a larger platform including digital arrivals, AI messaging, dynamic upsells, digital tipping, and fraud prevention.

FEATURES

- Self-service check-in/out on tablet
- ID scanning (via device camera)
- Payment processing
- Room key encoding OR mobile key (acquired OpenKey)
- Upsells and add-ons during check-in
- Loyalty program signup
- Registration card e-signature
- Branded / white-label UI
- Canary AI — guest messaging and automation
- Digital tipping
- Fraud prevention tools

STRENGTHS & WEAKNESSES

- + #1 rated, massive market validation
- + No expensive hardware — uses existing tablets
- + Mobile key via OpenKey acquisition
- + AI-powered guest communication
- + Strong PMS integrations
- - No dedicated kiosk hardware = less premium feel
- - No wayfinding, room service, events, listings
- - No AI avatar / video concierge
- - No ad revenue system
- - Key card dispensing requires 3rd party hardware

PRICING

Not publicly listed. Per-room/month SaaS model. Estimated: **$5-10 per room/month** for kiosk module. Full platform (all modules) likely **$10-20 per room/month**. No hardware costs (BYOD tablets).

Threat Level: MEDIUM-HIGH. Canary's strength is their low barrier to entry (no hardware purchase) and #1 market reputation. But they're fundamentally a tablet app, not a premium kiosk experience. Hotels wanting a "wow" lobby presence will choose NEXI. Hotels wanting cheap and fast will choose Canary.

06 — TIER 1

Virdee

Virdee

Hardware + Software | USA

virdee.io

Tier 1 — Direct

"Virtual Reception" platform. Combines mobile, web, and physical kiosk check-in. Notable clients include Virgin Hotels and major Las Vegas casino resorts (2,500+ rooms). Their kiosk offers video-call capability with remote agents — the closest thing to NEXI's AI Avatar concept, but with real humans instead of AI.

FEATURES

- Self-service kiosk check-in/out
- Physical key card dispensing
- Mobile web + native app check-in
- ID verification (kiosk camera)
- Payment processing
- Virtual receptionist (live video call to remote agent)
- F&B ordering via app
- Upsells and upgrades ($82K/month case study)
- Loyalty program integration

KEY NUMBERS

- 45% check-in conversion rate
- 60/40 kiosk-to-mobile usage split
- $82,000/month in upsell revenue (casino resort case)
- 100% contactless option for guests
- Virgin Hotels, LivAway Suites, Chicago Hotel Collection

PRICING

Enterprise pricing only. Not publicly listed. Estimated: **$10,000-25,000 per kiosk** + monthly SaaS fee. Targets large properties (100+ rooms).

Threat Level: HIGH. Virdee is the closest to NEXI's vision. They have the kiosk hardware, mobile complement, video assistance, and F&B ordering. The key difference: Virdee uses live humans for video support; NEXI uses AI Avatar. Virdee focuses on large casino/resort properties. They lack wayfinding, events, listings, and the content CMS depth that NEXI offers.

07 — TIER 1

Agilysys

Agilysys Express Kiosk

Hardware + Software | USA / Global

agilysys.com

Tier 1 — Direct

Long-established hospitality tech company. Express Kiosk is their self-service check-in product — focused on high-traffic areas (resorts, casinos, convention hotels). Part of a broader ecosystem including PMS, POS, inventory management, and spa/golf management.

FEATURES

- Self-service check-in, key encoding, check-out
- Folio email delivery
- PMS integration (Agilysys Visual One / Stay)
- Part of larger hospitality ecosystem

ASSESSMENT

- + Strong enterprise pedigree in casinos/resorts
- + Deep PMS integration
- - Very basic kiosk feature set — check-in/out only
- - Dated UI/UX
- - No concierge, AI, or content features
- - Closed ecosystem (works best with Agilysys PMS)

Threat Level: LOW-MEDIUM. Enterprise legacy player. Strong in casinos/resorts but limited innovation in the kiosk product itself. Opportunity for NEXI to position as the modern alternative.

08 — TIER 2

Enzosystems

Hardware + Software | Netherlands / Europe

enzosystems.com

Tier 2 — Regional

Dutch company. All-in-one modular aluminum kiosk designed for furniture integration. Clean European industrial design. Claims check-in in 3 minutes, check-out in 30 seconds. Their formula: 1 kiosk per 50 rooms + 1 extra.

FEATURES

- QR code scanning, document scanning
- Room key encoding (RFID)
- EMV compliant payment (CCV, Adyen, Worldline, etc.)
- Receipt/slip printing
- Walk-in guest support
- Extra key creation
- Pre-check-in online companion
- PMS integration (multiple systems)
- 24/7 support
- Modular aluminum housing — furniture-integrated

ASSESSMENT

- + Clean, modular hardware design
- + Furniture-integrated approach (premium lobby look)
- + Multiple payment providers supported
- + Online pre-check-in companion
- - European market only
- - Check-in/out only — no concierge features
- - No AI, no content management beyond check-in
- - Variable pricing ("depends on too many factors")

PRICING

Explicitly stated: "A simple price tag does not work for a system like this." Custom quotes based on rooms, PMS, lock system, payment provider, number of kiosks. Estimated: **$10,000-20,000 per kiosk** + monthly support.

09 — TIER 2

ASTA (Almex Japan)

ASTA / Almex

Hardware + Software | Japan / SE Asia

almex-sta.com

Tier 2 — Regional

#1 hotel kiosk in Japan with 600+ installations. 60+ years of Japanese manufacturing expertise (Almex parent company). Expanding into Southeast Asia (Malaysia, Singapore). They offer standing, desktop, and wooden cabinet form factors — all custom-branded.

PRODUCT LINE

- **Custom-Made Standing Kiosk** — Steel, fully branded, made in Malaysia
- **Desktop Kiosk** — Compact steel, counter-mounted
- **Wooden Cabinet Kiosk** — Aesthetic wood enclosure, lobby-friendly
- **Standard Japan Import** — Direct from Japan, basic but quality

FEATURES

- Check-in, walk-in, check-out
- PMS and keycard system integration
- Cash AND cashless payment
- Multilingual selection
- AI concierge with up to 100 Q&A (basic)
- Custom design, color, screen flow, promotions
- Room card dispensing + receipt printing
- Identity verification (passport scanning)

Notable: ASTA's strength is Japanese manufacturing quality and cash handling (critical in Japan/Asia markets where cash is still dominant). Their "AI concierge" is basic — limited to 100 pre-set Q&A pairs, not a real AI. The wooden cabinet design shows that lobby aesthetics matter to this market.

10 — TIER 2

KIOSK Embedded Systems

KIOSK Embedded Systems (Posiflex)

Hardware Manufacturer | Italy / Europe

kiosk.eu

Tier 2 — Regional

European hardware manufacturer. Makes the physical kiosk terminals that other companies (like straiv) use for their software. Modular design approach — hotels can customize the hardware configuration. Part of Posiflex group. "Made in Europe."

PRODUCTS

- **Modular Kiosk** — Fully customizable, brand-adaptable
- **Easy-Key Kiosk** — Compact, space-saving for small lobbies
- **Wallmount** — Semi-outdoor wall-mount for small hotels
- Optional ID-Scanner Pole (passport, keycard, printing)
- Italy fiscal compliance option

ASSESSMENT

- + Modular = hotels design their own look
- + Multiple form factors (freestanding, wall, counter)
- + Compatible with multiple software providers
- - Hardware only — relies on 3rd party software
- - European market primarily
- - Not a full solution, needs integration partner

11 — TIER 2

Tabhotel

Tabhotel

Hardware + Software | France / Europe

tabhotel.com

Tier 2 — Regional

French company, partners with AURES Technologies for hardware. Two products: "Tableo" (freestanding kiosk) and "Eole" (tablet for mobile reception). Claims check-in + key in under 1 minute. Targets hotels, residences, and youth hostels. Also serves healthcare (hospital check-in).

FEATURES

- Self check-in, check-out, walk-in, stay extension
- Passport scanning (automatic)
- Secure payment
- Key delivery
- Upselling during check-in
- Plug & play deployment
- Tablet mode for staff-assisted check-in (Eole)
- Web check-in companion (email/SMS/WhatsApp)

ASSESSMENT

- + Dual approach: kiosk + tablet
- + "Plug & play" — fast deployment
- + WhatsApp/SMS web check-in
- + Healthcare crossover experience
- - France/Switzerland focused
- - Basic feature set — check-in only
- - No concierge, AI, or content features

12 — TIER 2

Arribatec / Convene

Arribatec Hospitality (Convene)

Hardware + Software

Norway / Scandinavia

hospitality.arribatec.com

Tier 2 — Regional

Part of Arribatec Group (Oslo Stock Exchange listed). Scandinavian focus. Started in 2018, first customer was Sundvolden Hotel. Notable: exploring "Virtual Receptionist" integration — remote video-call agent support on kiosk. Listed deal with Best Western Plus Oslo Airport. NOK 22 million (~$2M USD) contract disclosed.

FEATURES

- Self check-in/out kiosk
- Table-mounted and freestanding options
- Branded for hotel
- PMS + door lock integration
- Virtual receptionist (video call, in development)
- Connects to existing hotel infrastructure

ASSESSMENT

- + Publicly traded — financial stability
- + Virtual receptionist concept (similar direction as NEXI's AI Avatar)
- + Clean Scandinavian design aesthetics
- - Small market share (Scandinavia only)
- - Limited feature set
- - Virtual receptionist is human-powered, not AI

13 — TIER 2

straiv

straiv

Software + Partner HW | Germany / DACH

straiv.io

Tier 2 — Regional

German "digital guest journey" platform. Check-in via smartphone, tablet at reception, or kiosk terminal. Partners with KIOSK Embedded Systems for hardware. Covers the full guest journey: digital guest folder, check-in, registration form, messaging, payment. Strong in DACH region (Germany, Austria, Switzerland). Notable client: Estrel Berlin (Germany's largest hotel).

MODULES

- Digital check-in (smartphone / tablet / kiosk)
- Digital guest folder (room info, hotel info)
- Digital registration form (Meldeschein — German legal requirement)
- Guest messaging
- Digital payment
- Key card integration

ASSESSMENT

- + Multi-channel (phone + tablet + kiosk)
- + Digital guest folder = concierge-lite
- + German compliance (Meldeschein) built-in
- + Big client wins (Estrel Berlin, MK Hotels)
- - DACH market only
- - Relies on 3rd party hardware
- - No AI avatar, wayfinding, room service, or ads

14 — TIER 3

Duve

Duve

Mobile First | Israel / Global

duve.com

Tier 3 — Mobile-first

#2 rated contactless check-in on Hotel Tech Report. Mobile-first guest experience platform. No kiosk hardware — everything through guest's phone (web app, no download required). White-

label guest app with check-in, upsells, communication, digital keys, local recommendations, and AI agents.

FEATURES

- Online check-in (pre-arrival via email/SMS/WhatsApp)
- Document scanning via phone camera
- Payment collection, security deposits
- E-signature registration card
- White-label guest app (no download needed)
- Room directory / digital spots
- Mobile key connection
- AI Agents for guest messaging
- Omnichannel inbox (email, SMS, WhatsApp, OTA)
- Smart upsells based on guest profile
- Analytics and review optimization
- Auto translations

PRICING (PUBLISHED)

- **Basic:** **$120/month** min — Online check-in + guest app
- **Pro:** **$150/month** min — + Communication hub (SMS, WhatsApp)
- **Premium:** **$200/month** min — + Smart upsells
- **Enterprise:** Custom pricing
- Room Directory add-on: $50/month min + $1/room/month
- 0% commission on in-house upsells

KEY NUMBERS

- 73% online check-in ratio (hotels)
- 83% online check-in ratio (vacation rentals)
- 18 minutes saved per reservation
- $180 average uplift per room per month

ASSESSMENT

- + Excellent mobile UX — best-in-class guest app
- + AI agents for automation
- + Strong upsell engine with proven revenue
- + No hardware costs
- - No physical kiosk presence at all
- - Depends 100% on guest having a phone
- - No wayfinding, events, room service on-property
- - No lobby "wow factor"

Competitive Position: Duve is not a direct competitor to NEXI's kiosk — they're the alternative approach entirely. Hotels will increasingly need BOTH: a physical kiosk in the

lobby (NEXI) AND a mobile experience (Duve/similar). NEXI could learn from Duve's guest app quality and upsell strategy.

15 — TIER 3

LIKE MAGIC

LIKE MAGIC

Mobile + Kiosk | Switzerland / Europe

likemagic.io

Tier 3 — Mobile-first

#3 rated contactless check-in. Swiss company with a digital guest journey platform. Notable: 90% check-in conversion target (very ambitious). Combines digital check-in with self-service kiosks for physical key cards. Partners with Apaleo PMS. Process automation via Camunda.

FEATURES

- Online check-in / check-out
- Intelligent booking engine
- Digital room keys
- Self-service kiosk for physical key cards
- Guest app (white-label)
- Real-time PMS sync (Apaleo)
- Process automation (Camunda engine)

ASSESSMENT

- + Best-in-class automation (Camunda)
- + 90% conversion target = serious about adoption
- + Hybrid: digital + physical kiosk for keys
- - European/Swiss market only
- - Kiosk is key-dispensing only, not a concierge
- - Tied to Apaleo PMS ecosystem

16 — TIER 3

Akia

Akia

Mobile / AI | USA

akia.com

Tier 3 — Mobile-first

#5 rated contactless check-in. AI-powered guest messaging platform with self-service check-in. Focus on automation and AI-driven communication. Lighter than Duve but fast-growing. Text-based AI concierge for guest questions.

17 — ANALYSIS

Market Gaps & Opportunities

Gap 1: Concierge Features on Kiosk

NO competitor offers wayfinding, events, local listings, AND room service on the same kiosk. Everyone focuses exclusively on check-in/out. NEXI is the only product treating the kiosk as a full-service concierge station.

Gap 2: AI Video Avatar

Virdee offers video calls with live humans. Arribatec is experimenting with virtual receptionists. ASTA has basic 100 Q&A chatbot. NOBODY has a real AI video avatar (HeyGen-style) on a kiosk. NEXI would be first-to-market.

Gap 3: Hotel Ad Revenue System

ZERO competitors offer an ad system. Hotels can't monetize their kiosk screen time. NEXI's 3-type ad system (banner, header, popup) creates a new revenue stream that no one else provides.

Gap 4: Facial Recognition at Check-in

Only Virdee mentions identity verification via camera. NEXI's facial recognition matched against ID document is a security differentiator that most competitors skip entirely.

Gap 5: Design & UX Quality

Most kiosk UIs look functional but dated. Ariane, ASTA, Enzosystems — all have utilitarian interfaces. There's a massive opportunity for NEXI to be the "Apple of hotel kiosks" — where design quality IS the selling point.

Gap 6: Content CMS Depth

Competitors offer basic branding customization (logo, colors). NEXI's CMS manages: menu items,

events, listings, FAQ, ads, video screensaver, module toggle — true content management that lets hotels personalize the entire experience.

18 — ANALYSIS

NEXI Competitive Advantages

ONLY NEXI HAS

- 16 modules on a single kiosk (vs. competitors' 2-3)
- AI Video Avatar (HeyGen) with voice interaction
- Room service ordering + scheduled delivery
- Interactive wayfinding maps
- Events feed (API/CMS)
- Local business listings with map
- 3-type ad system (Banner/Header/Popup)
- Facial recognition matched to ID scan
- Integrated camera + mic + speaker on kiosk
- Full CMS for content management (not just check-in settings)

NEXI'S POSITIONING

- **Not a check-in machine.** It's a complete hotel concierge station.
- **Revenue generator.** Upsells + ads + room service = new revenue for hotels.
- **Guest experience differentiator.** Hotels use NEXI as a selling point.
- **24/7 staff extension.** AI Avatar handles questions any hour.
- **Premium design.** The "Apple" of hotel kiosks.
- **Full stack.** HW + SW + CMS — one vendor for everything.

Risks to Address: Multi-language is Phase 2 — every competitor already has it. This needs to come quickly. Mobile companion (phone-based pre-check-in) is expected by 73% of guests. NEXI should plan for a mobile web companion that feeds into the kiosk experience. PMS integration breadth is critical — hotels won't switch PMS for a kiosk.

19 — ANALYSIS

Pricing Landscape

COMPETITOR	MODEL	HARDWARE COST	MONTHLY FEE	NOTES
Mews	SaaS (per room)	$0 (BYOD tablet)	$6-12/room	Kiosk included in PMS subscription
Canary	SaaS (per room)	$0 (BYOD tablet)	$5-10/room	Estimated, not public

COMPETITOR	MODEL	HARDWARE COST	MONTHLY FEE	NOTES
Duve	SaaS (flat + per room)	$0 (mobile only)	$120-200 flat min	Published pricing, mobile only
Ariane	HW purchase + SaaS	$15K-30K/unit	$200-500	Estimated, enterprise quotes
Enzosystems	HW purchase + SaaS	$10K-20K/unit	Custom	"A simple price tag does not work"
ASTA	HW purchase + SaaS	$10K-25K/unit	Custom	Varies by region (Japan vs. SE Asia)
Virdee	HW purchase + SaaS	$10K-25K/unit	Custom	Enterprise only, large properties
Agilysys	HW + License	Custom	Custom	Enterprise, often bundled with PMS
Arribatec	HW purchase + SaaS	~NOK 22M contract	Custom	Publicly disclosed BW deal
straiv	SaaS + partner HW	Partner dependent	Custom	DACH market pricing

Pricing Insight: The market splits into two pricing worlds. Software-only (Canary, Mews, Duve) charges $5-12 per room/month with zero hardware cost. Hardware companies (Ariane, ASTA, Enzosystems) charge $10K-30K upfront per kiosk unit plus monthly fees. NEXI needs to decide which model to follow — or create a hybrid (hardware lease + SaaS subscription).

20 — RECOMMENDATIONS

Strategic Recommendations for NEXI

1. Lead with "Concierge Station" positioning, not "Check-in Kiosk"

Every competitor positions as a check-in kiosk. NEXI should position as a **complete hotel concierge station** — check-in is just one of 16 things it does. This reframes the competitive conversation entirely. Hotels aren't comparing kiosks; they're evaluating a new category of guest experience technology.

2. Prioritize Multi-language (Move from Phase 2 to V1.1)

Every competitor supports multiple languages. International hotels (NEXI's primary market) need this from day one. At minimum: English, Spanish, French, German, Japanese, Chinese, Portuguese, Italian, Korean, Arabic. Consider auto-translation via AI for CMS content.

3. Build a Mobile Web Companion

73% of guests want mobile check-in options. NEXI should offer a mobile web pre-check-in that syncs with the kiosk — guests fill in details on their phone, then just scan QR at kiosk for instant key pickup (like Ariane's 20-second flow). Duve's mobile experience is the benchmark here.

4. The AI Avatar Is the Killer Differentiator — Make It Prominent

Nobody else has a real AI video concierge. Virdee uses live humans (expensive, not 24/7). ASTA has basic Q&A. NEXI's HeyGen AI Avatar that speaks, listens, and knows the hotel inside-out is genuinely unprecedented. This should be the hero feature in all marketing materials.

5. Highlight the Revenue Angle to Hotel Owners

Hotels care about ROI. Lead with numbers: upsell revenue (Virdee's case study: $82K/month), room service incremental revenue, ad revenue from local businesses. NEXI isn't a cost center — it's a profit center. No competitor frames it this strongly.

6. Design Quality as Brand Identity

Every competitor's UI is either utilitarian (Ariane, ASTA, Enzosystems) or generic-corporate (Canary, Mews). There's a massive gap for premium design. NEXI should be the kiosk that hotels WANT to show off in their lobby. The UI should look like it belongs in a luxury property.

7. Consider Hybrid Pricing Model

Hardware lease ($500-1,000/month per kiosk) + SaaS subscription ($X/room/month). This lowers the entry barrier vs. $15-30K upfront. Also consider: revenue share on upsells (2-5%), which aligns incentives with the hotel.
